IDT Part#

P91E0A-N0BVG2

P9149VWTNRG2

Replacement Part #

P91E0A-N1BVG2

P9149VWNRG2

REASON FOR DISCONTINUANCE:

Due to identified system performance issues with the P91E0A-N0BVG2, the configuration of the P91494VWTNRG2 requires Automatic Test Equipment (ATE) test limit and trim settings for proper operation of the products working together. The test limits and settings have resulted in extremely low production yields for the P91494VWTNRG2 which make production of this device no longer financially sustainable for IDT.

The replacement device for the P91E0A-N0BVG2 (PMIC) has been modified to remove the requirement for special device trimming on the P9149VWNRG2 distributed power units (DPU). Details of the changes have been communicated ahead of this notification.
